

Que é o Trengrouse?

Auga, auga por todas partes

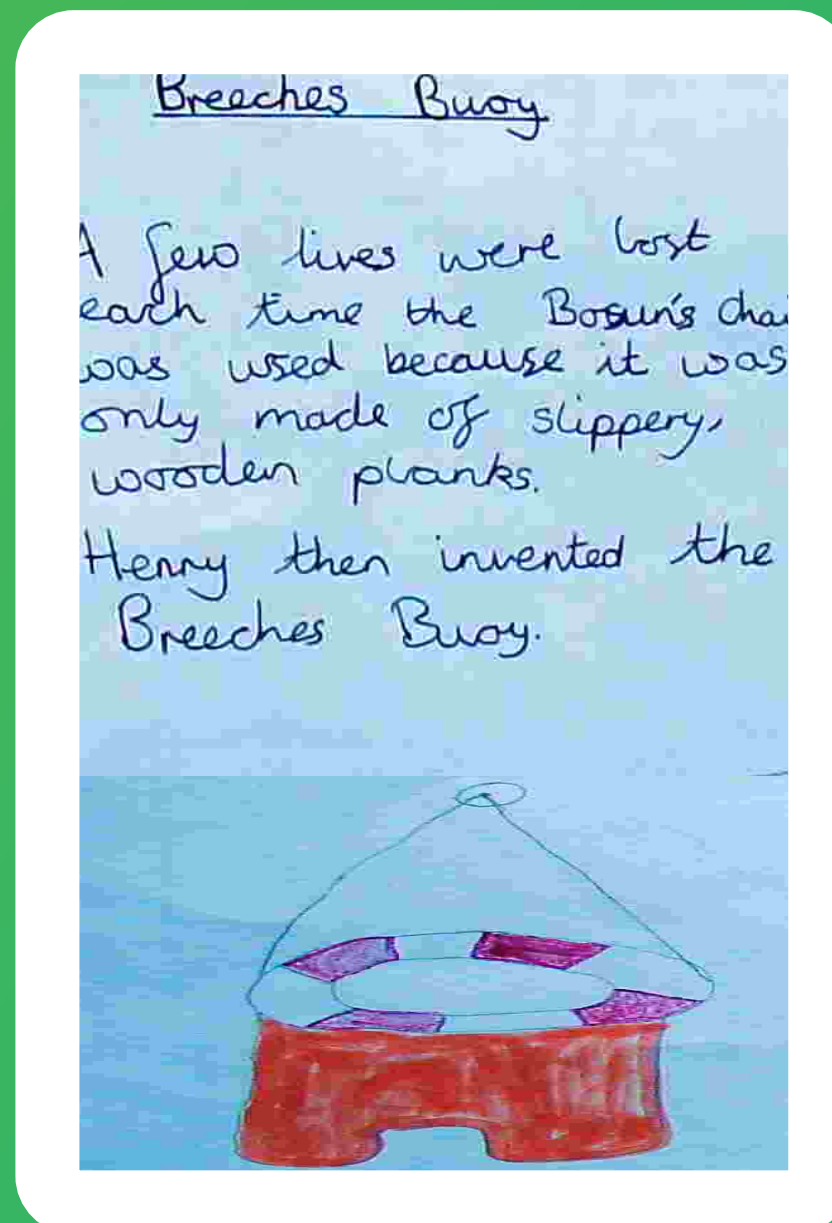

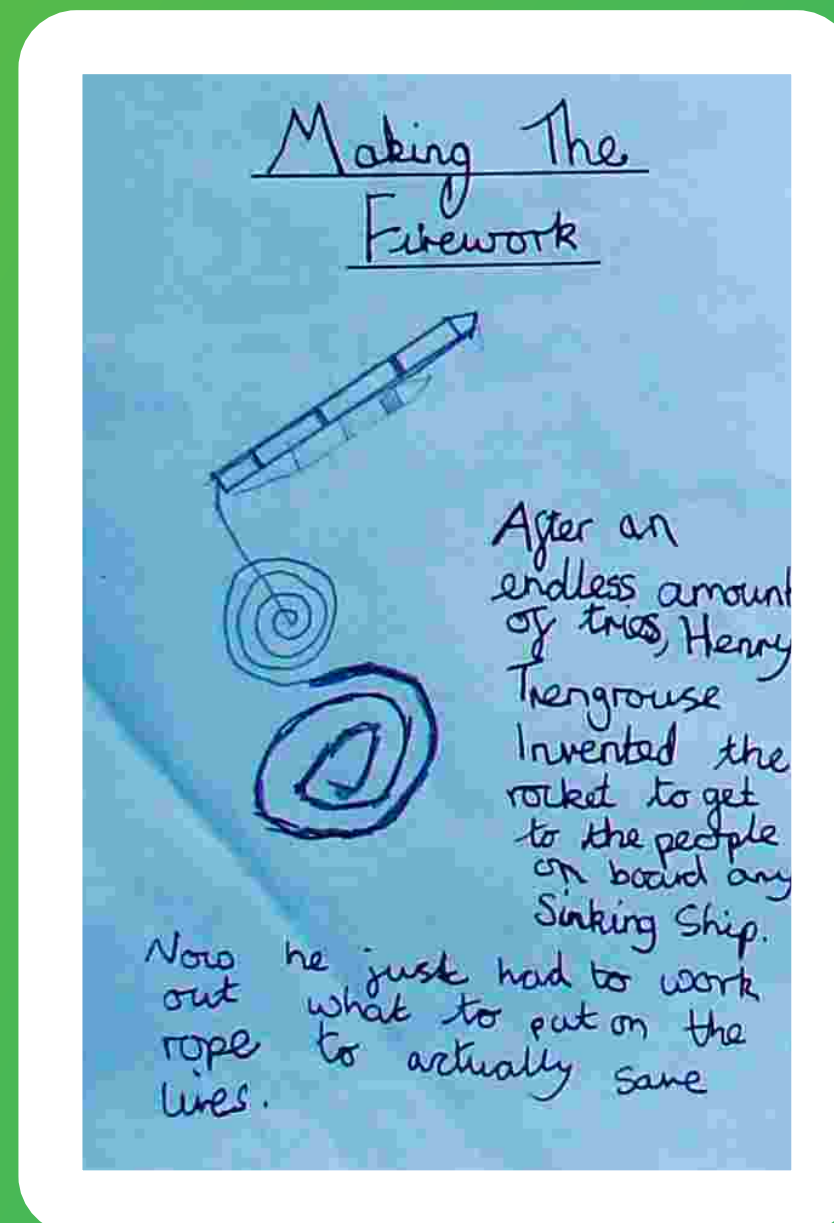

WATER, WATER EVERYWHERE

COMENIUS 1.1 PROXECTOS ESCOLARES

St. Michaels, Reino Unido / Primary School nº53, Polonia / St Brigid's, Reino Unido / Grundschule Fehrbellin, Alemania / CEIP Pio XII, Galicia

ALUMNADO DE ST. MICHAELS. HELSTON. REINO UNIDO

Henry Trengrouse naceu en 1772, estudou en Helston Grammar School. En 1807 foi testemuña do afundimento do "Anson" preto de Loe Bar. Como consecuencia diso, pasou o resto da súa vida facendo inventos para salvar as vidas nos barcos que se estaban a afundir preto da costa.

Trengrouse inventou un sistema de rescate con potentes foguetes de artificio para buques en perigo que lle chamou "A cadeira do contramestre". Ten salvado máis de 20000 vidas e é o que veu a ser coñecido como andarivel de salvamento. Tamén ideou o chaleque salvavidas.

Henry Trengrouse was born in 1772, was educated at Helston Grammar School. In 1807 he witnessed the sinking of the "Anson" near Loe Bar. As a result of this, he spent the rest of his life making inventions to save lives from ships which were sinking so close the shore. Trengrouse invented the rocket powered rescue system for ships in distress, which he named the Bosun's Chair or boatswain's chair. It saved over 20,000 lives and it was what came to be known as the Breaches Buoy. He also devised the life jacket.
